

LaTeX is cool, I guess...

Rachel Domagalski

Abstract

I ate French Toast for breakfast this morning.

1 Lists

Lists are useful, mkay?

1.1 Bullets

Things that I enjoyed about class this semester:

- I enjoyed the purple couch.
- I enjoyed using vim.

1.2 Numbered Lists

Stuff I didn't like about the semester:

1. Homework deadlines.
2. emacs

2 Equations

This is some hipster generalized version of the Euler-Lagrange equation:

$$\sum_{j=0}^n (-1)^j \partial_{\mu_1 \dots \mu_j}^j \left(\frac{\partial L}{\partial f_{i, \mu_1 \dots \mu_j}} \right) = 0 \quad (1)$$

The variables $\mu_1 \dots \mu_j$ are basically indices that span over the number of variables in the equation.

3 Tables

This is a table:

Favorite Foods	Favorite Bands	Favorite IDL Commands
Good sushi	Meshuggah	repstr()
Waffle Fries	Nevermore	transpose()
Pad Thai	Nightwish	print,
Gordo's Quesadillas	Van Canto	return,

Table 1: Favorite genre: Metal. The fourth band is some a cappella metal-type stuff that's cheesy as fuck, but pretty good.

LaTeX tables kind of suck. I'm done with LaTeX tables.

4 Figures

LaTeX figures have minds of their own.

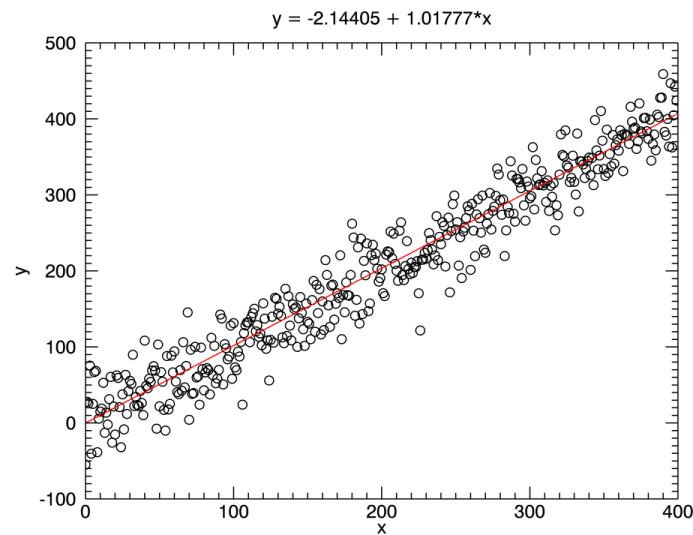

Figure 1: This is a crappy PNG file from the linear least squares tutorial.

moar figures...

Figure 2: This is a picture of the Leuschner radio telescope. The optical observatory can be seen in the background.

Figure 3: This is a picture of me holding a ROACH board in my lab over in the new Campbell Hall.

ok that's all folks...
